

# Recapcha

## The Write Way

I decided since the project would be hosted on heroku and be a more 'traditional' website I would implement recapcha to try and ward off the bot army! at least until I have the project complete.

I would like to expand The Write Way project more after the course is finished and maybe do differently some of the design choices I made over its course.

### Steps taken

1. Since I had a google account already I used this to sign up for the recapcha service.
2. I made my way over to the link below and followed the documentation.  
<https://developers.google.com/recaptcha/docs/v3>
3. I added the code need to the base.html.
4. I put it on all 3 forms joinus, signup and passwordreset and tested functionality.
